 in pediatric neurosurgery OPD (NEW OPD)

of shock and suspected meningitis as baby had persistent seizures after D3 of life. Baby developed fresh onset fever spikes at D5 of life, antibiotics were upgraded to Tigecycline and Colistin. CSF analysis was suggestive of meningitis/ Ventriculitis and culture has grown Acinetobacter Baumannii. POCUS USG cranium suggestive of ventricles. A diagnosis of ventriculitis was made and Intrathecal followed by intra ventricular Colistin was started. Along with IV Colistin and Cefaperazone sulbactam was continued. 14 days of Intra ventricular Colistin was completed, baby became afebrile; CSF cultures were sterile however CSF cell count and protein is elevated. Currently D27 of IV Colistin and D22 of cefaperazone sulbactam. Plan to complete 6 weeks of IV therapy. Blood culture has grown Enterococcus gallinarum sensitive to Linezolid which was given for 14 days.

3. **Hydrocephalus:** Baby has increasing head size and USG parameters crossing the action line. Cause of hydrocephalus was post meningitic. Baby needs neurosurgery opinion for the same for intervention.
4. **Neonatal Shock:** Managed with Fluid bolus and inotropes dopamine and noradrenaline initial 2 days.
5. **Neonatal Seizures:** Baby had seizures on off during the hospital stay, currently on oral Levipil and Phenobarbitone for the same.
6. **Feeds and Fluids:** The baby was initially started on intravenous fluids. Enteral feeds were gradually introduced and advanced to full feeds. At present, the baby is tolerating full feeds well, however baby is not taking spoon feeds and currently on OG feeds for the same.
7. **ROP screening** – Done on 15/07/2026 by Dr Nishant Bansal
